The graph shows the number of splicing junctions (x1000) on the y-axis and the percent of total reads on the x-axis.

- The blue line represents all junctions.
- The red line represents known junctions.
- The green line represents novel junctions.

As the percent of total reads increases, the number of splicing junctions also increases, with known and novel junctions showing distinct patterns.

Legend:
- All junctions
- Known junctions
- Novel junctions
