ABOUT GENEREVIEWS®

• The busy clinician’s #1 source for diagnosis, management, and genetic counseling information
• 725+ chapters with links to disease-specific and general consumer resources
• Includes chapters with a single-gene or -phenotype focus and overviews covering the genetic causes of common conditions
• Educational materials to clarify genetics concepts for patients and general clinicians
• Resources for genetics professionals on genetic testing, including founder variants and direct-to-consumer testing
• New and/or updated chapters published weekly
• Content linked to ClinVar, MedGen, GTR®, PheGenl, Medical Genetics Summaries, and dbGaP

Search GeneReviews® By:

GeneReviews® Chapters

- Ehlers-Danlos Syndrome, Hypermobility Type
- Hereditary Hearing Loss and Deafness Overview
- Cleidocranial Dysplasia Spectrum Disorder
- Prader-Willi Syndrome
- Beckwith-Wiedemann Syndrome

Volunteer to create a GeneReviews® chapter in your area of expertise:

The National Center for Biotechnology Information’s medical genetics and human variation resources (MGV) help the genetics community advance the understanding of medical genetics and associated clinical applications.

**ClinVar**
User-submitted database for information about genomic variation and its relationship to human health.

**dbGaP**
Database for genotype and phenotype research studies.

**dbSNP and dbVar**
Databases of small and large genomic variants including both common variations and clinical mutations.

**GTR®**
Provider-submitted database of clinical and research molecular, cytogenetic and biochemical genetic tests and supporting information.

**MedGen**
Aggregates information from and provides access to authoritative medical genetics resources.

**Medical Genetics Summaries and GeneReviews®**
Up-to-date, peer-reviewed, medically actionable summaries for heritable diseases and pharmacogenetics.

**OSIRIS**
Open source short tandem repeat (STR) analysis tool for forensic, clinical and research use.

**Variation Viewer**
Interactive browser for examination of nucleotide variants in a genomic context.
