Hydraulic Coupling of a Leafless Kauri Tree Remnant to Conspecific Hosts

M.K.-F. Bader and S. Leuzinger*

(iScience 19, 1–6, 2019)

In the originally published version of this article, due to a production error, “accounts for” was wrongly used in the following sentence in the introduction.

“While mycorrhiza-mediated nutrient transfer between trees has attracted considerable interest in recent decades (Brownlee et al., 1983; Vogt, 1991; Courty et al., 2010; Klein et al., 2016), the role of natural root grafts has received little attention over the past half century, despite some 150 woody angio- and gymnosperm species (Beddie, 1941; Bormann, 1966) reported to show the phenomenon globally, and accounts for more than 60% grafted individuals within a population (Graham and Bormann, 1966; Basnet et al., 1993).”

“Accounts for” has now been corrected to “accounts of” online. The publisher apologizes for this inconvenience.
